Massive system deployment

About us

 Developers of the free software DRBL, Clonezilla and more...

Steven is also the maintainer of GParted live CD

From Taiwan, working for the NPO NCHC (National Center)

for High-Performance Computing)

Taiwan image source: wikipedia.org

What is Clonezilla?

- A partition and disk imaging/cloning utility similar to True image® or Ghost®
- GPL license
- A bare metal recovery tool for

*Logo source: (1) Larry Ewing, Simon Budig and Anja Gerwinski, (2) Apple, (3) Microsoft, (4) Marshall Kirk McKusick, (5) VMWare (6) Distrowatch.com

Clonezilla Feature

- Free (GPL) Software
- File systems supported:
 - Ext2/3/4, ReiserFS, Reiser4, XFS, JFS, HFS+, BrtFS, UFS, Minix, VMFS, FAT and NTFS
 - Supports LVM2
 - Support some hardware RAID chips (by kernel)
- Smart copying for supported filesystem. For unsupported file systems sector-to-sector copying is done via dd.
- Boot loader: syslinux, grub 1/2; MBR and hidden data (if exist)
- Serial console
- Unattended mode
- One image restoring to multiple local devices
- Multicast supported in Clonezilla Server Edition (SE)
- The image format is transparent, open and flexible

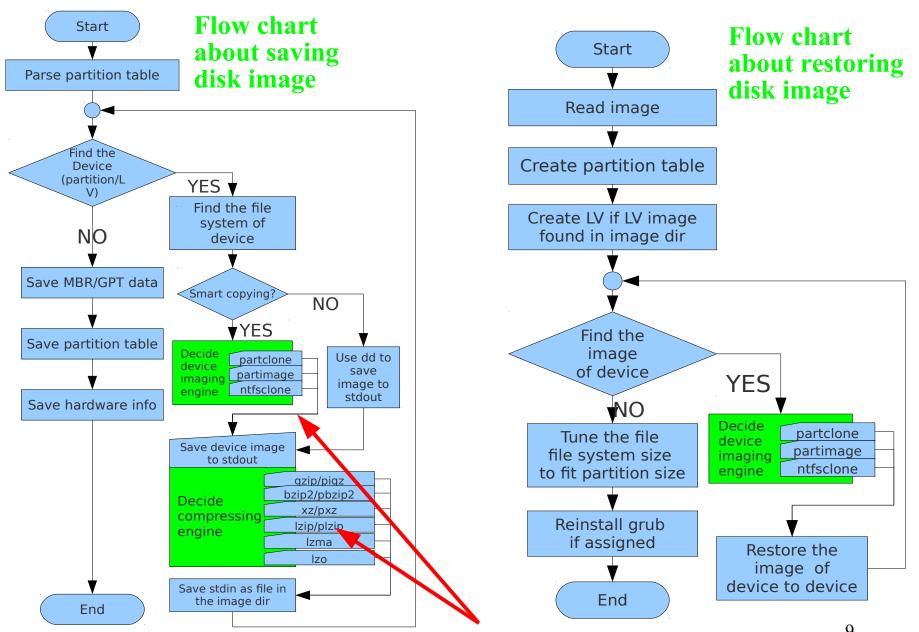

- Clonezilla [OCS (Opensource Clone System)]
 - Integrate Partclone (http://partclone.org/), Partimage, ntfsclone and udpcast¹ (http://udpcast.linux.lu/)
- What does it handle?
 - Physical data: basic unit is partition, then LVM, and part of hardware RAID
 - Partition table / Boot sector : (MBR:446+64+2, GPT, EFI)
 - Hidden data: data between boot sector and 1st partition
- Block-based recovery, is different from
 - File base recovery: Differential / Incremental backup
 - Hardware recovery (recovery card): Instant recovery
- Two type of release
 - Live edition
 - Server edition (SE)

Save and Restore procedure of Clonezilla

Imaging and compressing engines can be easily added

Project of the Month, January 2010

Clonezilla

Clonezilla is a partition or disk clone tool similar to Norton Ghost. It saves and restores only the used blocks in the hard drive. Two types of Clonezilla are available, Clonezilla live and Clonezilla SE (Server Edition). The filesystem supported by Clonezilla are: ext2, ext3, ext4, reiserfs, xfs, jfs of GNU/Linux, FAT, NTFS of MS Windows, and HFS+ of Mac OS. Therefore you can clone GNU/Linux, MS windows and Intel-based Mac OS whether they be 32-bit (x86) or 64-bit (x86-64) OS. For these file systems, only the used blocks in the partition are saved and restored. For unsupported file systems, a sector-to-sector copy is done by dd in Clonezilla.

Why and how did you get started?

On the 29th of March, 2003, the computers in the computer classrooms at the National Center for High-Performance Computing (NCHC, http://www.nchc.org.tw) were all upgraded. However, the deployment software did not support the new hardware. That's why we started the Clonezilla project. In the beginning, we started the Clonezilla server edition first, then, in 2007, Clonezilla live was created.

Who is the software's intended audience?

System administrators, that being, PC cluster administrators, computer classroom administrators, and of course anyone who needs a tool to clone or image his/her computer.

What are a couple of notable examples of how people are using your software?

- * The National Computer Centre Wonen, Netherlands, used Clonezilla to, "clone a 3 GB image to 27 machines with an average speed was 2.4 GB/min."
- * Cisco Systems used DRBL, "...in the design of our Cisco Computational Cloud cluster to multicast a 5 GB disk image to 64 machines simultaneously."
- * Information Systems Security, Southbridge, Massachusetts, USA, said, "So far, I have cloned 1,084 systems using DRBL. By carefully following the instructions on the DRBL website, and using multicasting and dividing the number of systems into groups of 80-100 PCs at the time, it took me somewhere between 16-38 minutes for each group of PCs, using images of various operating systems that averaged 1 GB in size. DRBL has reduced the recovery/cloning factor by more than 500% as compared with the previous commercial solution [we were] using"

The Best Free Software of 2012

It's the fifth year of PCMag's look at the best stuff you don't have to pay for, and it's our biggest list of great free software yet.

BACKUP/SYNC

24. Byckup

http://www.bvckup.com/

Windows

Try not to think about how to pronounce Byckup. Just know that when it comes to onsite backup, you now have a friend. It can handle real-time backup, copy only modified parts of files, and it doesn't take much memory to run. Get it now; it's only free while in beta testing.

25. Create Synchronicity

http://synchronicity.sourceforge.net

Windows | Portable

This small, multi-lingual program can run locally or portably to back up or sync files you specify when you create a profile.

InfoWorld: The Best Open Source Admin Tools 2013

Bossie Awards 2013: The best open source admin tools

InfoWorld's top picks among all the handy open source tools that make life easier for sys admins

By InfoWorld staff, InfoWorld, September 17, 2013

Like 3 Slideshow Add a comment Clonezilla Sys admins will love this open source clone of Norton Ghost. The Clonezilla disk imaging software supports major partition and file system types, and a server edition of the program can clone multiple computers simultaneously from a single disk image. Clonezilla can also take advantage of multicast to push images to large numbers of computers if they support PXE booting and Wake-on-LAN. For maximum cloning efficiency, Clonezilla saves (and restores) only the disk blocks actually in use on supported Clonezilla file systems. For imaging Windows computers, Clonezilla can use the open

Use case in enterprise

- Nagappan Alagappan from VMware
 - Palo Alto, CA, USA
 - "As a product company, we need to test our product in all popular operating system, when exploring different opportunity, we found Clonezilla appropriate, Reason: It support all the Linux distribution (RedHat, SUSE, Ubuntu, Mandriva) and different file system, which we use (ext3, ext4, reiserfs)"
 - Initially evaluated Clonezilla live and found a very good performance, Windows XP image restoration 7 minutes, Ubuntu 3 minutes, SUSE / RHEL 5 minutes from a NFS server.
 - Later we (in VMware) have implemented a service, which will automate the Clonezilla reimaging part, without any manual intervention."

Use case in enterprise

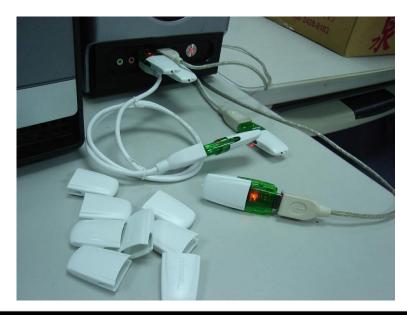

- Juergen Chiu
- Canonical Ltd. Taipei, Taiwan
 - Clonezilla helps me a lot in system backup , recovery and ISO image creating
 - "In my job, I need to handle different type of system and create the ISO image for customers. Your great tool, Clonezilla, helps me a lot in system backup, recovery and ISO image creating. I only need to download the Clonezilla zip file, and create the bootable usb key in few easy steps, then I can use that key to backup the systems and create the ISO image by the same key. And the key is just the recovery partition as I need. All procedures take me only about 1 hour to finish all stuffs. I love your tool and that is really cover all functions what I need to have in Linux system recovery scope. Clonezilla is the best all-in-one tool that I have never seen before."

Use case in enterprise

- Barny Sanchez
- Information Systems Security, Southbridge, Massachusetts
- Cloned 1,084 systems using DRBL (Clonezil la SE)
 - "I've used DRBL to clone 1,084 systems so far! It was si mple! All I had to do was divide each system into groups of 80-100 PCs and then use multicasting to do the clonin g. It took anywhere from 16-38 minutes to clone each system. The images of various operating systems averaged 1 GB in size. DRBL has reduced the recovery/cloning fact or by more than 500% as compared to the commercial sol ution I used previously! You can imagine how happy my project managers are!"

Use case in Education

- Alvin Su
 - Shen-Mei Elementary School, Taiwan
- Cloned more than 100 USB flash drives, each with 3 GB OS and data. Every batch 8 USB flash drives,
 - $\sim 30 \text{ mins}$

Limitations of Clonezilla

- The destination partition must be equal or larger than the source one
- Recovery Clonezilla live with multiple CDs or DVDs is not implemented yet
- Differential/incremental backup is not implemented yet
- Live imaging/cloning is not implemented yet
- Software RAID/fake RAID is not supported by default (extra manual processing is required)

Changes and features from July/2012

- Path changed. All the Clonezilla-related files are now in /usr/sbin/, /usr/bin/, and /usr/share/drbl/. No more in /opt/drbl/.
- With options -k1 and -icds, now it's possible to restore image from larger source image to smaller disk.
- Minix support
- Multipath devices, e.g. /dev/cciss/c0d0, are now supported natively.
- No more linking them to /dev/sd[a-z]. Therefore now LVM on cciss device are supported.
- Xen disk (/dev/xvd[a-z]) was added as a supported device.
- Three log files are added: /var/log/clonezilla.log, /var/log/ocs-netcfg.log and /var/log/ocs-mount.log
- Imaging/Cloning performance has been improved. User reported about 80% more.

Changes and features from July/2012 (continued)

- Llive-build, live-boot and live-config 3.x used from Clonezilla live 2.2.0-1.
- Updating the boot entries of EFI NVRAM after system is restored.
- Booting on a uEFI secure boot enabled machine (ubuntu-based Clonezilla live, from Clonezilla live 20130924-raring.

Current work and planned developments

- Support uEFI PXE booting in Clonezilla SE machine
- LVM without partition
- Local CCISS disk to remote CCISS disk
- Using Dnsmasq in Clonezilla SE

Wishlist

- Software RAID/FakeRAID support
- P2V friendly
- File-based imaging
- Recovery Clonezilla live with multiple CDs or DVDs
- More file systems support, ZFS, ReFS...
- Encryption file system support. Encryption for the image
- Scheduling
- WLAN setting
- ISCSI source disk
- Password protection
- Super easy mode
- GUI

Questions?

Appendix

Bare Metal Recovery

- The term "Bare Metal" refers to a computer that does not contain an operating system and data.
- Bare Metal Recovery/Restore
 - It means to the process of restoring data to a "bare metal" component
 - Typically the process includes reinstalling the operating system and software applications and then, if possible, restoring data and configurations..
- When need to do?
 - Mass deployment
 - Disaster recovery
 - Hardware replacement/crash
 - **–**

Bare Metal Recovery (cont')

- Available types:
 - Block-based (image) recovery (e.g. 'dd')
 - File-based recovery (e.g. 'cp', 'tar', 'rsync'...)
 - Mix both: combine file base with block information
- Use different tool for different purpose

- Save a lot of time if choose right toolkit

- Raw copying*
 - A possibility to perform sector-by-sector copying of a whole partition
- Smart copying*
 - A possibility to distinguish which portions of the partition really contain data and to copy these only
- Live copying*
 - A drive or volume can be copied/imaged while it is in use, avoiding the need for booting into a separate operating system or Live CD.
- Smart copy full disk
 - A possibility to distinguish which portions of the disk really contain data and to copy these only
