Massive system deployment

About us

- Developers of the free software DRBL, Clonezilla and more...
- Steven is also the maintainer of GParted live CD
- From Taiwan, working for the NPO NCHC (National Center for High-Performance Computing)

Taiwan image source: wikipedia.org

What is Clonezilla?

- A partition and disk imaging/cloning utility similar to True image® or Ghost®
- GPL license
- A bare metal recovery tool for

Clonezilla Feature

- Free ([GPL](#)) Software
- File systems supported:
 - [Ext2/3/4](#), [ReiserFS](#), [Reiser4](#), [XFS](#), [JFS](#), [HFS+](#), [BrtFS](#), [UFS](#), [Minix](#), [VMFS](#), [F2FS](#), [FAT](#) and [NTFS](#)
 - Supports [LVM2](#)
 - Support some [hardware RAID](#) chips (by kernel)
- [Smart copying](#) for supported filesystem. For unsupported file systems sector-to-sector copying is done via [dd](#).
- Boot loader : [syslinux](#), [grub 1/2](#) ; [MBR](#) and hidden data (if exist)
- [Serial console](#)
- Unattended mode
- One image restoring to multiple local devices
- [Multicast](#) supported in Clonezilla Server Edition (SE)
- The image format is transparent, open and flexible

Partners

- The following companies either embed Clonezilla in their products or promote Clonezilla:

– Linmin

– eRacks Open Source Systems

– Miracle Linux

Changes and features from Jan/2014

- Image **encryption**
- **WebDAV** device as image repository
- **Chrome OS/Chromium OS** imaging
- Device like `/dev/rd/c0d0` and `/dev/ida/c0d0` RAID cards
- Support PV on disk, not only on partition
- Fake RAID/**firmware RAID** is now supported if its device naming style is `/dev/md`.
- The partition from an image could be now restored to different name device, e.g. `sda1` could be restored to `sdb5`.
- File system **f2fs** support
- "ocs-img-2-vdk" was added. It can be used to **convert Clonezilla image as virtual disk file** (qcow2 and vmdk) via KVM
- **Slovak** and **Turkish** locales were added

- Q&A

Backup as a service

- Requirement for **system backup**:
 - Local and cloud backup
 - **Security**
 - Flexibility
 - Bare-metal recovery
- Image-based backup by Clonezilla
 - Image repo: local, NFS, CIFS, SSHFS, WebDAV
 - AES 128 bits (or 256 bits)

Images source: wikipedia.org

Backup as a service server side

- BaaS server
 - Server provides one of the following service
 - WebDAV
 - SSHFS
 - CIFS
 - NFS

- FOSS solutions:

- OwnCloud

- FreeNAS

- GNU/Linux + Apache WebDAV/SSHFS/CIFS/NFS

- ...

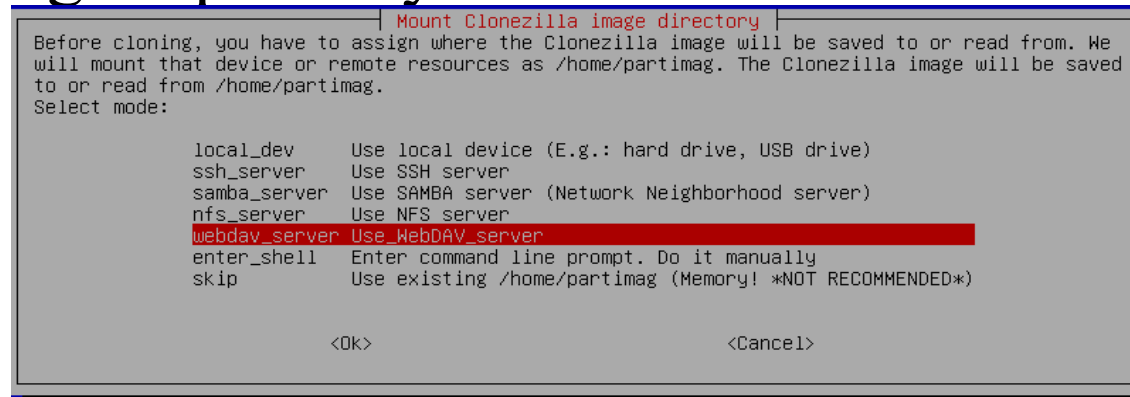

Backup as a service

client side: interactive mode

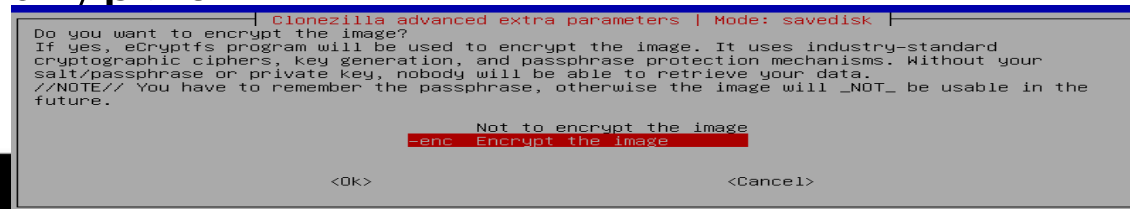

- Clonezilla live \geq 2.3.2-22
 - Boot Clonezilla live on the machine you want to backup
 - Configure network connection
 - Choose image repository:

- SSHFS
- CIFS
- NFS
- WebDAV

- Choose encryption

Backup as a service

client side: almost unattended

- Clonezilla live \geq 2.3.2-22
 - Pre-seed configuration in the boot parameters, e.g:
 - `locales=en_US.UTF-8`
 - `keyboard-layouts=NONE`
 - `ocs_prerun1="dhclient -v eth0"`
 - `ocs_prerun2="ocs-tune-conf-for-webdav"`
 - `ocs_prerun3="mount -t davfs -o noexec http://192.168.120.254:8080/share/ /home/partimag"`
 - `ocs_live_run="ocs-sr -q2 -j2 -z1p -enc -p true savedisk myimg sda"`
- //NOTE// volume size is based on the free memory due to davfs2 cache mechanism limitation.

```

The only plain text file in the image dir, Others are encrypted

```
# This image was saved with ecryptfs
disk_of_img="sda"
parts_of_img="sda1 sda5"
time_of_img="2015-0220-0650"
disks_size_all_of_img=" 8590MB"
```

AES is not currently known to be susceptible to known-plaintext attacks.

Volume size reset by ocs-tune-conf-for-webdav

Demo - Save an image to WebDAV

- Server side:
 - WebDAV, provided by the running Ubuntu 14.04 system with enabled Apache2 WebDAV
 - URL: `http://192.168.56.1/share/`
- Client side:
 - Use Clonezilla live to 2.3.2-22 with preseeded boot parameters to save a local disk as an image
 - `locales=en_US.UTF-8 keyboard-layouts=NONE`
 - `ocs_prerun1="dhclient -v eth0"`
 - `ocs_prerun2="ocs-tune-conf-for-webdav"`
 - `ocs_prerun3="mount -t davfs -o noexec http://192.168.56.1/share/ /home/partimag"`
 - `ocs_live_run="ocs-sr -q2 -j2 -z1p -enc -p true savedisk myimg sda"`

Conclusion

- With **image encryption**, you can provide BaaS for system imaging to **multiple users in the same image repository**.
- WebDAV service is **more flexible**. However, there might be some limits. E.g. single file size limit on the server side. Therefore you have to make sure it's compatible with Clonezilla.
