What is Clonezilla?

- A partition and disk imaging/cloning utility similar to True image® or Ghost®
- GPL license
- A bare metal recovery tool for

*1

Clonezilla Features

- Free ([GPL](#)) Software
- File systems supported:
 - Ext2/3/4, ReiserFS, Reiser4, XFS, JFS, HFS+, BrtFS, F2fs, UFS, Minix, VMFS, F2FS, NILFS2, FAT and NTFS
 - Supports LVM2
 - Support some [hardware RAID](#) chips (by kernel)
- [Smart copying](#) for supported filesystem. For unsupported file systems sector-to-sector copying is done via [dd](#).
- Boot loader : [syslinux](#), [grub 1/2](#) ; MBR and hidden data (if exist)
- [Serial console](#)
- Unattended mode
- One image restoring to multiple local devices
- [Multicast](#) and [bittorrent](#) (in beta) deployment are supported in Clonezilla Server Edition (SE) and lite server
- The image format is transparent, open and flexible

System Deployment via BitTorrent- Challenge and Solution

- Challenge
 - For peer to peer file sharing, a temp storage space is required
 - For bare metal recovery, the available storage space is RAM
 - Because the existing disk is the destination disk to be overwritten
 - However, RAM disk is normally not big enough for system deployment
 - Disk image: ~ GB to 100 GB or more
- Solution
 - By Date Huang, etc.
 - Separate the seeder and downloader
 - Seeder
 - Special format image file
 - Downloader
 - Directly write image to disk and share the blocks from disk

Bittorrent in Clonezilla

- Image server**
- Metainfo
 - Special format of image
 - Seeder with usual BT program, e.g. utorrent

System Deployment via BitTorrent

- The image has to be in **special format** for bittorrent purpose. Hence extra space on hard drive is required.

• • •

- Each file stores a section of used continuous file system blocks. The file name denotes its offset on the partition.

System Deployment via BitTorrent

- Extra packages are required:
 - Ezio, ocs-bttrack, ctorrent, mktorrent
 - Ezio is a blocks deployment program with bittorrent, and is developed by Date Huang (tjjh89017), Ching-Hsuan Yen (mangokingTW), and Pu Lee (leepupu):
<https://github.com/tjjh89017/ezio>
 - Ocs-bttrack is a bittorrent tracker, and is developed by Clonezilla team based on BitTornado
<https://github.com/stevenshiau/ocs-bttrack>
- Partclone >= v0.3.5
- More tests and improvements are required before official release

Created a new partition 1 of type 'Linux' and of size 6 GiB.
/dev/sda2: Created a new partition 2 of type 'Extended' and of size 2 GiB.
/dev/sda3: Created a new partition 5 of type 'Linux swap / Solaris' and of size 2 GiB.
/dev/sda6:
New situation:

Device	Boot	Start	End	Sectors	Size	Id	Type
/dev/sda1	*	2048	12584959	12582912	6G 83	Linux	
/dev/sda2		12587006	16775167	4188162	2G 5	Extended	
/dev/sda5		12587008	16775167	4188160	2G 82	Linux swap / Solaris	

The partition table has been altered.
Calling ioctl() to re-read partition table.
Syncing disks.
This was done by: LC_ALL=C sfdisk --force /dev/sda < /home/partimag/xenial-x64-desktop-20161210/sda-pt.sf 2>&1 | tee -a /var/log/clonezilla.log
Checking the integrity of partition table in the disk /dev/sda...

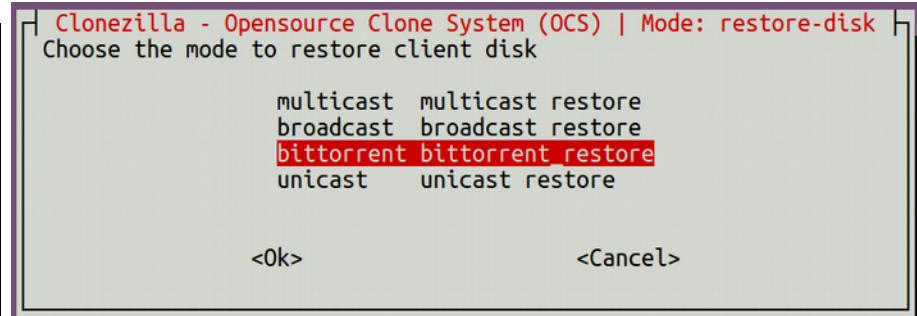

Informing the OS of partition table changes.... done!

The first partition of disk /dev/sda starts at 2048.
Restoring the hidden data between MBR (1st sector, i.e. 512 bytes) and 1st partition, which might be useful for some recovery tool, by:
dd if=/home/partimag/xenial-x64-desktop-20161210/sda-hidden-data-after-mbr of=/dev/sda seek=1 bs=512 count=2047
2047+0 records in
2047+0 records out
1048064 bytes (1.0 MB, 1.0 MiB) copied, 0.0342036 s, 30.6 MB/s

Restoring partition /dev/sda1...

Clean filesystem header in device /dev/sda1...
Running: eziostatic /home/partimag/btzone/xenial-x64-desktop-20161210/sda1.torrent /dev/sda1
Start downloading

Tests

- BitTorrent (BT) deployment testing results at NCHC computer classroom
 - 1 PC as the server, 38 clients. Image size is 6 GB (uncompressed)
 - To deploy the image to 38 clients
 - 360 secs with **multicast** mechanism
 - 750 secs with **BT** mechanism
 - 250 secs (180+70) if **deploying 3 clients first** (180 secs), once it's done, then deploying the rest of 35 (70 secs).

Demo

- Clonezilla live experimental 2.5.3-1exp
 - Not ready for public testing yet until early Aug
- Deploy Debian Stretch by BitTorrent to 2 clients

More info on site

- Workshop
 - Clonezilla workshop
 - Wednesday 5/Jul, 09:40-10:40 (Workshop, Room A 013 Coté Serveur)
- Booth
 - Clonezilla booth at the Village of associations
